USER'S MANUAL

Foreword

- ◆ This manual contains text, diagrams and explanations which will guide the reader in the correct installation and operation of the Ex1n4AD Analog input block. It should be read and understood before attempting to install or use the unit. If in doubt about the operation or use of Ex1n4AD Analog input block please consult Liyan Electric.

Introduction

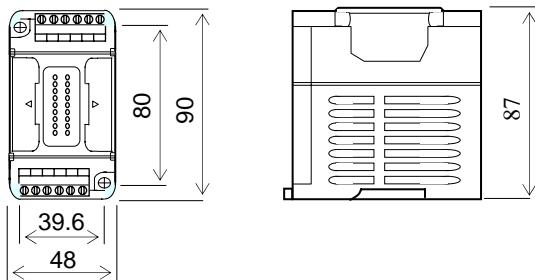

The Ex1n4AD analog input block (hereafter referred to as "Ex1n4AD") converts 4 points of analog input values (voltage input, current input, temperature input) into digital values, and transfers them to the PLC main unit.

The Ex1n4AD can be connected to Ex1n, Ex2n Series PLC.

- 1) Analog inputs can be selected from the voltage input, the current input and the thermocouple input (temperature input) by the input mode setting by the TO instruction given by the PLC main unit and the connection method.
- 2) The voltage input can be selected within the range from -10 to +10 V. The current input can be selected within the range from +4 to +20 mA.
The thermocouple input can be selected among the K type, and J type. (The input characteristics cannot be adjusted when the thermocouple input is used.)
- 3) The resolution is 5mV (20 V x 1/4,000) when the voltage input is used, 10.00 µA (40 mA x 1/8,000) when the current input is used, and 0.1 °C when the thermocouple input is used.

External Dimensions

Dimension: mm

Terminal Signal: This module don't occupy any I/O points and never perform wiring to terminals.

Indication	Description
PWR	Lit while power is normally supplied to "24V" and "24G" terminals of Ex1n4AD.

Ex1n4AD Wiring

Ex1n4TC Wiring

Note:

- 1) To avoid effects of noise to make result is not accurate, please use cable with isolation and should be far away high-voltage power supply.
- 2) To avoid electric shock or damage of product, turn off all power supply when performing wiring work.

Remark:

*1 Use a two-core, twisted, shielded cable for the analog input line, and separate it from other power lines or a lines easily induced.

*2 If there is voltage ripple in the input or there is noise in the external wiring, connect a capacitor of approximately 0.1 to 0.47 μF , 25 V.

*3 For the current input, make sure to short-circuit the "VN+" terminal and the "IN+" terminal (N: input channel No.).

*4 Make sure to connect the \equiv terminal to the \equiv terminal of the PLC main unit to which Class D grounding (100 Ω or less) is performed.

Specifications

General specifications

Item	Specifications
Ambient temperature range	0 to +55 °C during operation, storage temperature: -20~70°C
Ambient humidity	35 to 85 % RH during operation (Dew condensation shall not be allowed.)
Noise resistance	Noise voltage 1,000 Vp-p, noise width 1 µs.
Withstand voltage	500 V AC for 1 min (between analog input terminal and each terminal of PLC main unit)
Insulation resistance	DC500V / 5 MΩ
Operating atmosphere	Corrosive gas and many dusts shall not be detected.

Power supply specifications

Item	Specifications
Interface driving power supply	24 V DC±10%, 100 mA, supplied via terminal from outside
CPU driving power supply	5 V DC, 50mA, supplied via extension cable from PLC main unit

Performance specifications

Item	Specifications
Conversion speed	When only voltage input and current input are used 500 µs x Number of used channels
Insulation method	Photocoupler insulates analog input area from PLC. DC/DC converter insulates power supply from analog I/O.
Number of occupied I/O points	Don't occupy any I/O points
Applicable PLC	Ex1n, Ex2n Series PLC, V1.40 or more

Details of buffer memories

1 BFM #0, #1: Input mode selection

The input mode by writing a numeric value to BFM #0 and BFM#1 to assign CH1 to CH4 operation mode to BFM#0. In the input mode specification, each BFM is expressed in a 4-digit hexadecimal code, and each channel No. is assigned to each digit.

O=0: Voltage input mode (-10 to +10V), resolution (20V x 1/32,000)

O=1: Voltage input mode (-10 to +10V), resolution (20V x 1/8,000)

O=2: Voltage input mode, analog value direct display (-10,000 to +10,000), resolution (20V x 1/20,000)

O=3: Current input mode (4 to 20mA), resolution (16mA x 1/8,000)

O=4: Current input mode (4 to 20mA), resolution (16mA x 1/4,000)

O=5: Current input mode, analog value direct display (4,000 to 20,000), resolution 2.00 μ A

O=6: Current input mode (-20 to 20mA), resolution (40mA x 1/16,000)

O=7: Current input mode (-20 to 20mA), resolution (40mA x 1/8,000)

O=8: Current input mode, analog value direct display (-20,000 to +20,000), resolution (40mA x 1/40,000)

O=9: Thermocouple input mode, K type, Celsius display (-100 to +1,200°C), resolution 0.1°C

O=A: Thermocouple input mode, J type, Celsius display (-100 to +600°C), resolution 0.1°C

O=B: Thermocouple input mode, T type, Celsius display (-100 to +350°C), resolution 0.1°C

O=C: Thermocouple input mode, K type, Fahrenheit display (-148 to +1,832°F), resolution 0.1°F

O=D: Thermocouple input mode, J type, Fahrenheit display (-148 to +1,112°F), resolution 0.1°F

O=E: Thermocouple input mode, T type, Fahrenheit display (-148 to +662°F), resolution 0.1°F

2 BFM #2 TO BFM #5: Number of times of averaging

When using BFM #10 to #13 as the average data, write the number of times of averaging to BFM #2 to BFM #5.

The setting range of the number of times of averaging is 1 to 8. If select the immediate data, value of BFM#2 to BFM#5 is 1.

3 BFM #10 to BFM #13: Analog data

The A/D conversion data of each channel is written to BFM #10 to BFM #13.

You can select the immediate (current value) data or the average data by setting the number of times of averaging (BFM #2 to BFM # 5).

4 BFM #18: Bxxxxxxxxnnnnnnnn

Bit No.	b15 to b18	b7	b6	b5	b4	b3	b2	b1	b0
n=0	Reserved	Reserved	Reserved	Reserved	Reserved	CH4 disable	CH3 disable	CH2 disable	CH1 disable
n=1	Reserved	Reserved	Reserved	Reserved	Reserved	CH4 enable	CH3 enable	CH2 enable	CH1 enable

5 BFM #22: Sets convenient functions

The functions described below are assigned to b0 to b3 of BFM #22. When a bit is set to ON, the assigned function becomes valid.

b0 : Data addition function

When this bit set to ON, the measured value will add addition value and stored into BFM#10~BFM#13.

b1 : Upper / lower limit value detection function

Reserved

b2 : Reserved

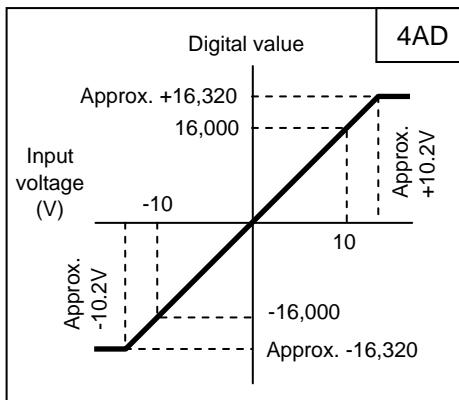

b3 : When this bit set to ON, peak value will be stored into BFM#101~BFM#104, BFM#111~BFM#114.

6 BFM#30: Model code

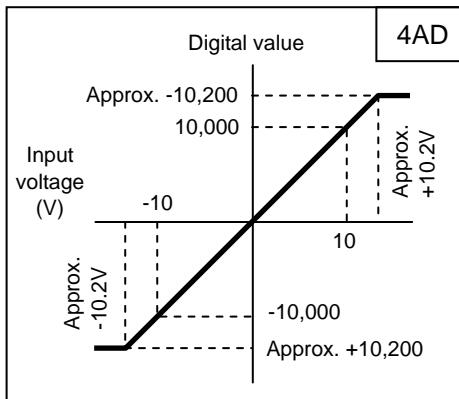

Fixed value : “K2xxx” ° Xxx is version code

Standard I/O Characteristics

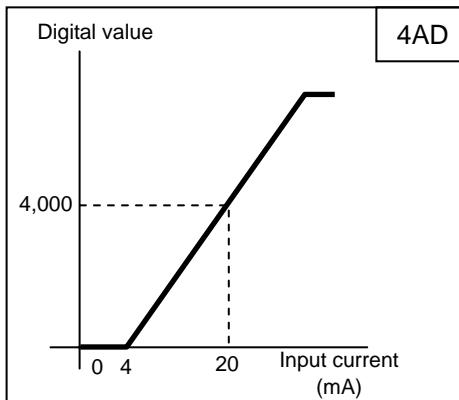

0. Voltage input, -10 to +10V, 20V x 1/32,000

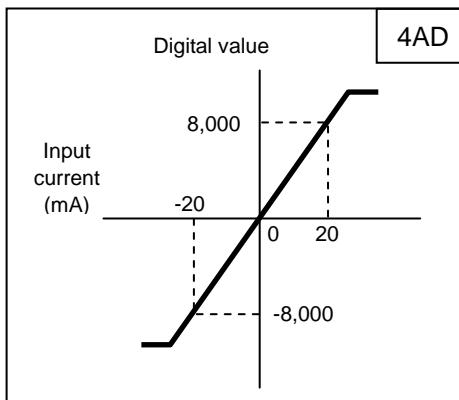

2. Voltage input, direct display (-10,000 to +10,000)

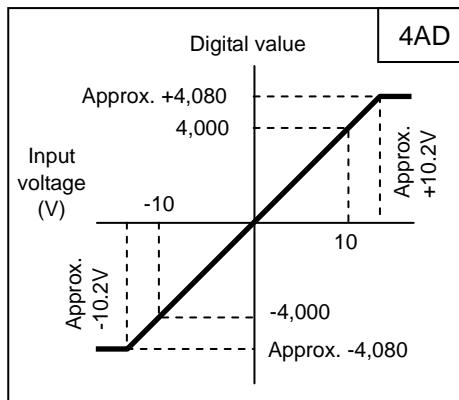

4. Current input, 4 to 20mA, 16mA x 1/4,000

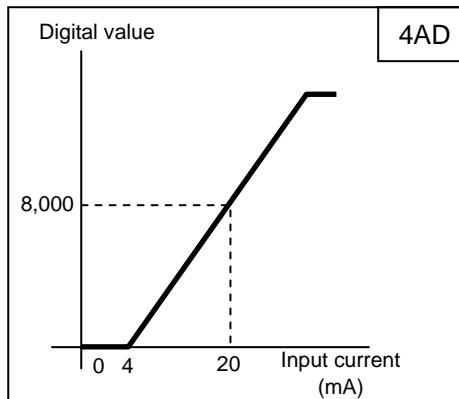

6. Current input, -20 to +20mA, 40mA x 1/16,000

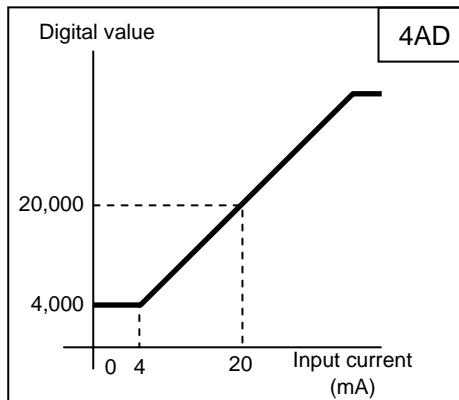

1. Voltage input, -10 to +10V, 20V x 1/8,000

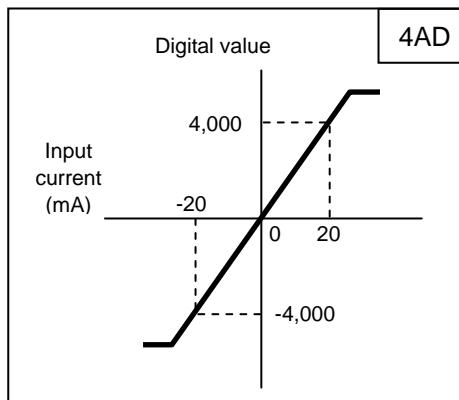

3. Current input, 4 to 20mA, 16mA x 1/8,000

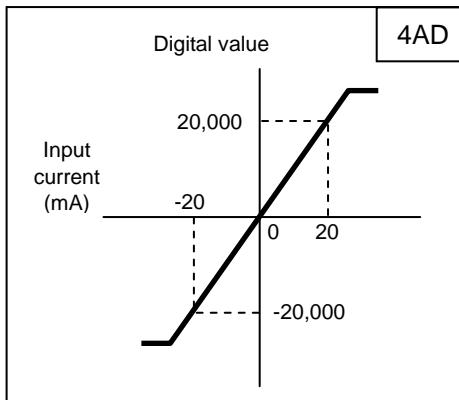

5. Current input, direct display (4,000 to 20,000)

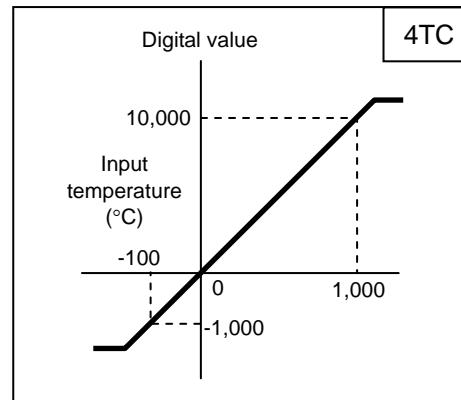

7. Current input, -20 to +20mA, 40mA x 1/8,000

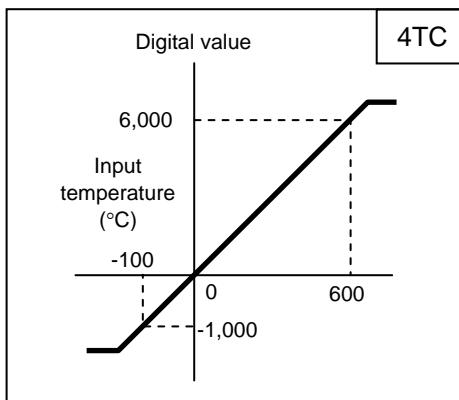

8. Current input, direct display (-20,000 to +20,000)

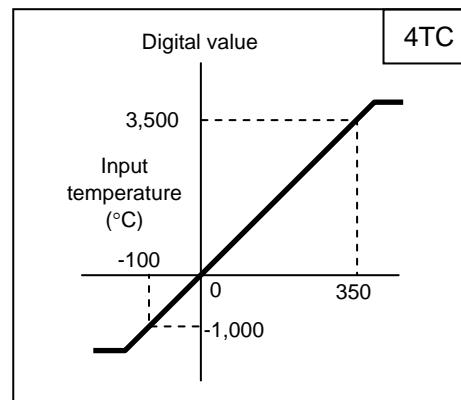

9. Thermocouple input, K type, Celsius

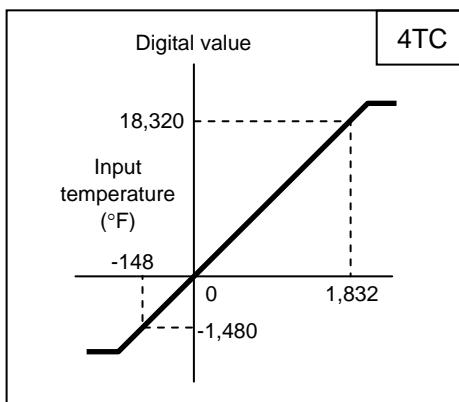

A. Thermocouple input, J type, Celsius

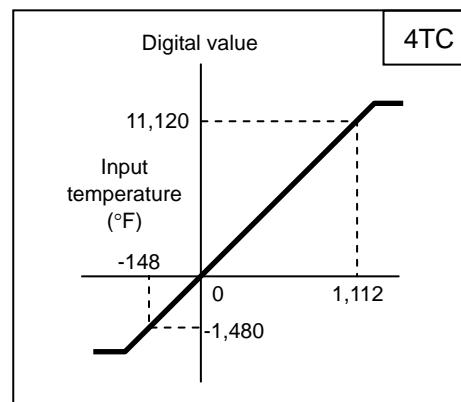

B. Thermocouple input, T type, Celsius

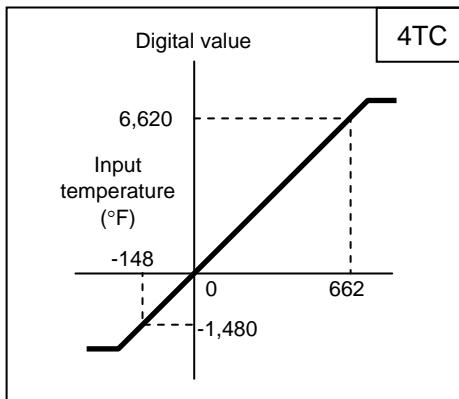

C. Thermocouple input, K type, Fahrenheit

D. Thermocouple input, J type, Fahrenheit

E. Thermocouple input, T type, Fahrenheit

FROM/TO Instruction

FROM Instruction

FNC(78)			16 bits: FROM(P) ----- 9 steps	EX	EX _{1S}	EX _{1N}	EX _{2N}
D	FROM	P	32 bits: (D)FROM(P) ----- 17 steps				

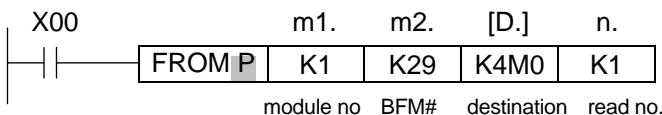

Operands: |← [D.] →|

Operands: | \leftarrow \rightarrow | m1 = 0 ~ 7 no. of special module

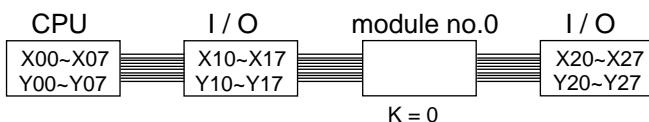

m2.= 0 ~ 32767 no. of buffer memory (BFM)

n.= 1 ~ 31 no. of read (when D, n=1~15)

- ◆ When X00 ON, the buffer memory of special module BFM#29 to be read out and stored into M00~M15.

<< Special Device Module Number m1>>

- ◆ The BFM is the memory address of special module.
 - ◆ The number of special module is address to NO.0~NO.7 and beginning with the one closest to the CPU unit.
 - ◆ The special module can up to 8 maximum, and no occupy i/o points.

TO instruction

FNC(79)			16 bits: TO(P) ----- 9 steps	EX	EX _{1S}	EX _{1N}	EX _{2N}
D	TO	P	32 bits: (D)TO(P) ----- 17 steps				

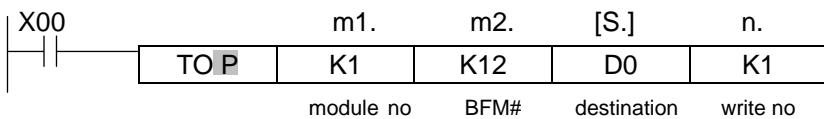

Operands: |← [S.] →|

Operands: \leftarrow \rightarrow | m1 = 0 ~ 7 no. of special modules

m2.= 0 ~ 32767 no. of buffer memory (BFM)

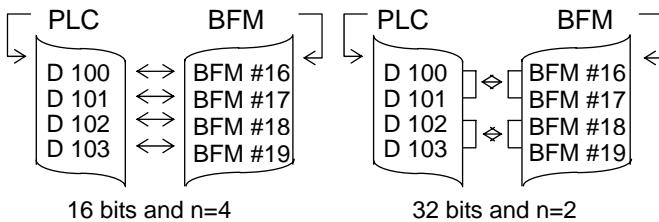

n= 1 ~ 31 no. of write (when D, n=1~15)

- ◆ When X00 ON, the content of D0 to be write into the buffer memory BFM#12 of the special module NO.1

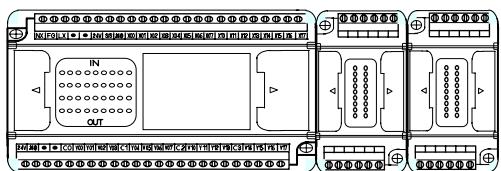

- ♦ If used pulse command can decrement cycle time.
